## Portland and Progressive Stormwater Design

- Regarded as a leader in progressive and innovative stormwater management
  - Manage on-site and at-the-source
  - Small-scale, vegetated facilities
- Manage for water quantity and quality
- Even more...
  - Educate the public
  - Create visual amenity
  - Add value
  - Become art features

## Municipal Stormwater Management Manuals

Typically...

- Stormwater manuals recommend or require a sizing approach.
- Usually to a specific on-site stormwater model:
  - Rational
  - TR55
  - Etc.
- Basically... formulas which are left to the designer to interpret and are difficult for administrators to verify.

INTRODUCTION

 METHODS  
 RESULTS  
 DISCUSSION & CONCLUSIONS

**SIMPLIFIED  
 APPROACH**

### sizing factor

Basin	0.09
Swale	0.09
<b>Filter Strip</b>	<b>0.20</b>
Planter	0.06

- Gently sloped area that is designed to receive sheet flows and slow down runoff. Typically linear facilities that run parallel to the impervious surface and are commonly used to receive the runoff from walkways and driveways.
- Growing medium
  - Infiltration rate = 2.0 in/hr
  - Depth = 18"
- 5' minimum width
- 10% max slope

INTRODUCTION  
 BACKGROUND \ \ SIMPLIFIED APPROACH  
 METHODS  
 RESULTS  
 DISCUSSION & CONCLUSIONS

## FILTER STRIP

### sizing factor

Basin	0.09
Swale	0.09
Filter Strip	0.20
<b>Planter</b>	<b>0.06</b>

- Structural landscape reservoirs used to collect, filter, and infiltrate stormwater, allowing pollutants to settle and filter out as the water percolates through the vegetation, growing medium, and gravel.
- Reservoir depth = 12"
- Growing medium
  - Infiltration rate = 2.0 in/hr
  - Depth = 18"

INTRODUCTION

 METHODS  
 RESULTS  
 DISCUSSION & CONCLUSIONS

## EXAMPLE

# Presumptive Approach

- Designed for larger, commercial sites to allow for accurate sizing of small-scaled BMPs.
- Calculates detailed specifications of BMP design including soil depth, storage depth, and drain rock depth.
- Allowable on any project type.
- Still, comparatively easy to use, but more cumbersome than simplified method.

**Presumptive Approach Calculator ver. 1.2**

Project Name:  Catchment ID:

Project Address:  Date:

Designer:  Permit Number:

Company:

**Instructions:**

1. Complete this form for each drainage catchment in the project site that is to be tested per the Presumptive Approach.
2. Provide a distinctive Catchment ID for each facility coordinated with the site basin map to complete the appropriate calculations with the facility.
3. The maximum drainage catchment to be modeled per the Presumptive Approach is 1 acre (43,560 SF).
4. Identify the infiltration test procedure used to estimate the infiltration rate of the native soil at the bottom of the proposed facility. Refer to Section 3.2.2 for discussion about testing for storm and number of tests required.

**Drainage Catchment Information**

Catchment ID:

Impervious Area:  sq ft

Impervious Area:  sq ft

Impervious Area Count Number:

Area of Open Space:  sq ft

**Site Soils & Infiltration Testing Data**

Infiltration Testing Procedure:

Native Soil Field Tested Infiltration Rate:  in/hr

From High Infiltration Per SEC 323MM Section 1.2

**Correction Factor Component**

CF <sub>soil</sub> (Changes from 0 to 1):

**Design Infiltration Rates**

Rate for Native Soil:  in/hr

Rate for Imported Draining Medium:  in/hr

**Hydrograph**

Flow Rate (cfs) vs. Time (min)

INTRODUCTION  
 BACKGROUND \ \ PRESUMPTIVE APPROACH  
 METHODS  
 RESULTS  
 DISCUSSION & CONCLUSIONS

## PRESUMPTIVE APPROACH

# Presumptive Approach

Designers can control key features:

- Geometry
- Infiltration rate
- Reservoir depth
- Sub-surface storage
- Basically... a designer can create his/her own section and size it.
- Model includes all calculations for approval.
- Everyone's calculations are the same.

**Presumptive Approach Calculator ver. 1.2**

Project Name:  Catchment ID:

Date:

**Instructions:**

1. Identify which Stormwater Hazard Category the facility:
2. Select Facility Type.
3. Identify facility shape of surface facility to more accurately estimate surface volume, except and sloped planter that use the PAC Sloped Facility Worksheet to enter data.
4. Select type of facility configuration.
5. Complete data entry for all highlighted cells.

Catchment facility will meet Hazard Category:

**Goal Summary:**

Parameter	Value	Unit
Area	1.00	Acres
Area	43560	Sq Ft

**Facility Type = Swale**

**Facility Configuration**

Refer to Sloped Facility Worksheet and enter Variable Parameters

**BELOW GRADE STORAGE COMPONENT**

Infiltration Area =  sq ft

Surface Capacity Volume =  cu ft

Storage Module Depth =  in

Freeboard Depth =  in

Surface Capacity at Depth 1 =  sq ft

Retention Area at 15% Depth =  sq ft

GM Storage Infiltration Rate =  in/hr

Infiltration Capacity =  cfs

**BELOW GRADE STORAGE**

Blank Storage Bottom Area =  sq ft

Blank Storage Depth =  in

Blank Storage Capacity =  cu ft

Native Design Infiltration Rate =  in/hr

Infiltration Capacity =  cfs

**RESULTS**

Surface: PAGE: 8 CF, 8X, Surf. Cap. Used

Sub: PAGE: 8 CF, 8X, Surf. Cap. Used

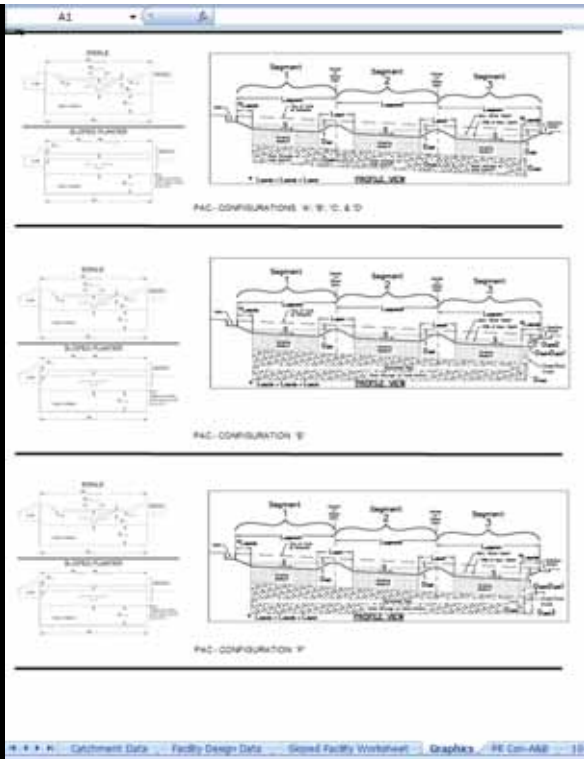

**FACILITY FACIES**

Total Facility Area Including Freeboard = 726 sq ft

Storage Rate / Total Facility Area / Catchment Area = 8.209

# DISCUSSION & CONCLUSION

INTRODUCTION  
BACKGROUND  
METHODS  
RESULTS  
DISCUSSION & CONCLUSIONS

## Preliminary Conclusions

- Sustainable stormwater management requires new tools.
- Both tools are helpful to encourage the design and implementation of small-scale BMP's.
- **Civil Engineers VS Landscape Architects:**
  - All designers explore multiple locations and start sizing early on.
  - Civil Engineers have a better command and understanding of the tools.
  - Civil Engineers prefer the more complex Presumptive Approach.
  - Landscape Architects prefer the simpler Simplified Approach.
  - Landscape Architects typically rely on Civil Engineers to finalize facilities.

INTRODUCTION  
BACKGROUND  
METHODS  
RESULTS  
DISCUSSION & CONCLUSIONS

## Preliminary Conclusions

- Recommendations for Portland:
  - Encourage the use of both tools.
  - Simplified early in process to encourage creativity.
  - Presumptive later in the process to ensure accuracy.

Simplified Approach

Presumptive Approach

Maximize creativity and solutions generated

Ensure technical accuracy and refinement

INTRODUCTION  
BACKGROUND  
METHODS  
RESULTS  
DISCUSSION & CONCLUSIONS

## What's Next

- More responses?
  - Statistical Analysis
  - Recommendations to Portland
  - Comparison to other similar models?
- 
- Thank you...
